

## Marion Darche

Among the many peculiarities which contribute to make New York unlike other cities is the construction of what may be called its social map. As in the puzzles used in teaching children geography, all the pieces are of different shapes, different sizes and different colours; but they fit neatly together in the compact whole though the lines which define each bit are distinctly visible, especially when the map has been long used by the industrious child. What calls itself society everywhere else calls itself society in New York also, but whereas in European cities one instinctively speaks of the social scale, one familiar with New York people will be much more inclined to speak of the social map. I do not mean to hint that society here exists on a dead level, but the absence of tradition, of all acknowledged precedents and of all outward and perceptible distinctions makes it quite impossible to define the position of any one set in regard to another by the ordinary scale of superiority or inferiority. In London or Paris, for instance, ambitious persons are spoken of as climbing, in New York it would be more correct to speak of them as migrating or attempting to migrate from one social field to the next. It is impossible to imagine fields real or metaphorical yielding more different growths under the same sky.
